STAR UNIVERSAL (GOSPORT) LIMITED

STAR 61

Free standing sealer for upright bags

- Range of seal lengths from 650mm to 1200mm
- Standard weld width 6mm, up to 20mm available
- Single heat or double heat jaws for thicker bags
- Available with the Star MkV or ARTICS control systems
- Foot switch initiation of the seal cycle with solenoid or pneumatic jaw closure
- Jaws release automatically upon completion of the sealing cycle
- Finished in powder coated mild steel or stainless up to IP65 rating

Options

Height adjustable bag support platform

Heavy duty foot switch or single/twin push button initiation

Constant heat versions for multi wall paper bags

Can be supplied as sealing head only for mounting on OEM equipment

Twin parallel weld for extra security

Suitable for sealing fluids

Separate controls for very hostile environments

Labyrinth seals to allow gases to escape

Custom build versions for specific requirements

Controls

MkV Timer

The Star MkV timer board allows separate setting of the weld and cool cycles on the machine. It has a built in compensation device to reduce the weld cycle if the machine is being cycled quickly for more consistent seals.

ARTICS

The Star ARTICS PLC controller can produce identical seal quality every time the machine is used. It does this by controlling the element ribbon temperature as well as seal time. It also comes with a built in batch counter and preheat setting to reduce seal time to a minimum.

1200mm twin parallel weld machine with a flat based stand to slide under existing conveyor

Stainless steel IP65 Star 61 with bag support stand

Star 61 with separate power pack for use in an extremely aggressive environment
